

# How to Pass Variable Values From Command line?

- We can also pass variable values from command-line while executing playbooks and they are also called as command-line arguments
- Example:
  - Only For Strings:
  - `ansible-playbook <playbookName> --extra-vars "myName=nginx"`
  - Or
  - `ansible-playbook <playbookName> -e "myName=nginx"`
  - `ansible-playbook <playbookName> -e "myName=nginx myData='Ansible Playbooks'"`
  - For Any Data Type or Data Structure:
  - `ansible-playbook <playbookName> -e "{ 'myValue': 6, 'myList': [3,4,5], 'myDict': { 'a': 'first', 'b': 'second' } }"`
